Yes, the attached spreadsheet shows one sampling event (8/18/2018) before the effective date of the new permit (9/1/2018) and hits of PFAS other than PFOA and GenX. I have highlighted the PFAS parameters and concentrations (which are shown in ppb). We do not have data, as far as I am aware at present, of other sampling events for PFAS other than PFOA and GenX that took place before the effective date of the new NPDES permit.

Rick, I believe the answer is yes.

Jeff, Could you send us the spreadsheet with the sampling data filtered for the non PFOA and GenX from 2018. Thanks.

chad

Thanks, Chad.

As for the list of contaminants in order that Chemours is now required to monitor, are you aware of any existing monitoring data from Chemours' discharges to the Ohio, or elsewhere, that did detect some or all of those (aside from GenX and PFOA)?
